

CHAPTER 6: FUTURE TRAFFIC VOLUME PROJECTIONS

When planning ahead to address the needs of our transportation network, it is important to project the level of traffic that we can anticipate during our planning period and beyond. Population growth plays a key role in determining the needs of a transportation system. Generally, an increase in population results in an increase in the use of transportation facilities, which in most cases means more vehicles on the roadways. For this reason, future population growth is often a good indicator of future increases in traffic volumes. To help paint this ‘picture,’ we have used population figures compiled by the U.S. Census Bureau, Portland State University Population Research Center, and projections developed by Marion County in coordination with the individual cities in Marion County.

Based on this information, County staff has developed projections of what the future traffic volume will be for the major roadways within Marion County in the year 2025. These project the anticipated demand for travel on each road assuming the roadway will have adequate capacity to handle this demand. We then identify locations where capacity problems are anticipated to develop during the 20-year timeframe of this plan, and these locations are described in Chapter 8.

6.1 POPULATION FORECAST

Marion County is required by Oregon Revised Statutes (ORS 195.036) to establish and maintain a population forecast for the entire county, in coordination with the local cities. This forecast is used in maintaining and updating comprehensive plans. As part of the Marion County Comprehensive Plan, 2020 population projections were developed in cooperation with local governments and adopted by the County in October 1998. The adopted 2020 projections utilized population information provided in the 1997 Office of Economic Analysis (OEA) long-range population forecast report for the state and counties, population estimates for cities and counties provided by the Portland State University Population Research Center, and the respective plans and studies of each of the cities. A conservative growth approach focusing on existing Urban Growth Boundary capacities contained in the existing comprehensive plans of the cities was utilized and adopted by the County.

Amendments to the adopted population projections are reviewed and adopted on a periodic basis, as new population data is made available. The City of Woodburn 2020 population projection was updated in November 2004 based on 2000 Census data, the 2004 OEA long-range population forecast report which incorporated 2000 Census data, and a population and employment projection study developed by the city. Marion County will again be addressing the population projections for all the cities and the unincorporated area of the county through a coordinated process to develop and adopt new 2025 or 2030 population projections for use in updating comprehensive plans.

In 1998, Marion County initiated a countywide Growth Management Project that resulted in the 2002 adoption of an Urban Growth Management Framework that is part of the Urbanization Element of the Marion County Comprehensive Plan. The Framework is a coordinated planning strategy that provides the county and cities with a guide when considering urban expansion needs and decisions in response to growth issues. It contains long-range 2050 population forecasts that can be used to begin considering planning issues beyond the standard 20-year horizons of local plans.

Table 6-1 shows the population figures counted in the 2000 census and preliminary 2003 estimates from Portland State University for each city in Marion County, the unincorporated areas of the County, and the County as a whole. Also shown are the County's adopted 2020 projections and the Growth Management Framework 2050 long-range forecast for the population of each city, the unincorporated areas of the County, and the County as a whole.

CITY	2000 CENSUS	2003 PSU ANNUAL ESTIMATE (Preliminary)	2020 COUNTY FORECAST	2050 LONG-RANGE FORECAST
Rural ⁽³⁾	50,231	50,758	60,967	58,313
County Total	284,834	295,900	359,581	500,400

- (1) Marion County portion only (Salem and Keizer forecasts coordinated with SKATS and are portion of entire Salem/Keizer area forecast total)
- (2) Includes Keizer
- (3) Estimated by County staff.
- (4) Most unincorporated urban population included in urban area projections.

6.2 FUTURE TRAFFIC PROJECTIONS

Future traffic volumes have been projected by County Staff for the year 2025. These projections are based on many factors, including:

- Population projections for the areas served by the road
- Anticipated growth of cities
- Anticipated growth of business traffic on the road
- Connections to recreation or tourist activities
- Directness of the route
- Character of the roadway
- Anticipated transportation trends
- Land development patterns

As a reference, **Figure 6-1** shows the existing traffic volumes on roadways in rural Marion County. This gives us a picture of the traffic volumes currently on the County road system today.

Figure 6-2 shows projected future traffic volume demand on selected major rural roadways. The projected future traffic volumes have been used to identify roadway segments that could experience heavy traffic and unacceptable levels-of-service within the next 20 years if no improvements are made, such as transit improvements, Transportation System Management (TSM) and Transportation Demand Management (TDM) strategies, or roadway improvements. As it is not possible to predict the growth of a region with complete accuracy, future traffic projections will need to be updated regularly as more accurate and updated information becomes available.

It is important to note that these projections are for future traffic volume demand. This is our estimate of the number of drivers who would want to use that roadway in the year 2025. This would be equivalent to the projected traffic volume on that road if an adequate supply of roadway capacity is available. In some cases, roadway expansion would have to occur before these volumes of traffic could actually travel on that road. If sufficient capacity is not available, drivers would likely divert to other routes. If these other routes are not available, or if they also lack available capacity, some drivers may choose to make the trip to a different location, not make the trip, or reduce their visits to or business in the region.

Figure 6-3 shows the anticipated growth in traffic volume demand on key roadways in Marion County as a percentage of the current traffic volume on the road.

Table 6-2 shows the projected future traffic volume demand for Arterials, Major Collectors, and Strategic Corridors in Rural Marion County, including State Highways. 1995 volumes are also listed for reference.

These traffic volume projections give us an idea of the demand that will be placed on our road system in 20 years, and helps us understand where capacity problems are anticipated to develop. Traffic volumes are anticipated to increase on virtually all roadways in Marion County, and some key corridors are expected to see large increases in traffic volume. In some cases, key roadways and intersections currently do not have enough capacity to handle the amount of traffic that will want to use that road.
