

# OACES 2016

## ENHANCED GRAVEL ROAD TREATMENTS WORKSHOP

Tuesday, March 15, 2016

9:30 AM to 3:00 PM  
(with a working lunch)

Deschutes County Fairgrounds in Redmond, OR

Focus will be on agencies sharing their successes and issues of using **alternate** treatments and products for:

1. Gravel Road Safety
2. Wash-boarding, Speed, Curves
3. Dust Abatement
4. Environmental Sensitive Areas
5. Soil Stabilization
6. Upgrades: converting to oil mat or asphalt hard surfaces

Many are using a wide assortment of both old and new products and tools with mixed results, which includes:

Lignin	Earthbind	Enzymes	Asphalt Grindings
Coherex	Rhino Snot	High-Flow 150	Various Rock Mixes

*This is **not** a workshop for routine Gravel Road Maintenance, but rather the focus is in getting acquainted with the newer products and procedures agencies have been using to **enhance** public safety, quality of living and to reduce costs of gravel road maintenance.*

In the same format as the OACES Chipseal workshops, **agencies will share and present** their process and outcomes of using products to address the above issues. We want to learn first-hand from staff who have experimented with products and methods, as well as cost thereof. Sales representatives and contractors are not invited. **Short PowerPoint presentations will be greatly welcome!**

More workshop information can be found at <http://www.co.marion.or.us/PW/Roads>.

The 2016 Cascade East Vegetation Management Conference (CEVMC) follows on March 16-17 at the same location (Deschutes County Fairgrounds). To obtain Oregon and Washington herbicide licenses CEU credits, visit [www.CEVMC.com](http://www.CEVMC.com).

This workshop is sponsored by APWA, OACES and Oregon T2.

Cost is \$12 (CASH ONLY) per attendee to be collected at the workshop for the working lunch and refreshments.

**Workshop Administrator:**  
**Don Newell**
