COVID-19 Data & Trends

November 3, 2020

Table of Contents

1. Infections, Hospitalizations & Deaths by Onset Date - Monthly Summary
2. Cases: Numbers and Trends
3. Hospitalizations: Numbers and Trends
4. Deaths: Numbers and Trends
5. Infection Trends by Source (14-day moving average)
6. Deaths by Infection Source and Case Fatality Rate
7. Distribution and Number of Deaths by Infection Source - Cumulative
8. Weekly Sporadic Case Rate and Counts
9. Cumulative Incidence Rate
10. Rate and Count of COVID-19 Sporadic Cases by Zip Code in Marion County per 100,000 population
11. Daily Case Numbers Due to Sporadic Transmission
12. Rate of Sporadic Transmission by Area
13. Distribution of Cases, Hospitalizations and Deaths by Infection Source
14. Percentage of COVID-19 Cases in Marion County by Source of Infection
15. Percentage of COVID-19 Cases in Oregon by Source of Infection
16. Percentage of COVID-19 Cases Associated with an Outbreak by Type of Facility in Marion County
17. Percentage of COVID-19 Cases Associated with an Outbreak by Type of Facility in Marion County (Pie Chart)
18. Percentage of COVID-19 Deaths in Marion County with Underlying Medical Conditions
19. Percentage of COVID-19 Deaths in Marion County by the Number of Underlying Medical Conditions Present at Time of Death
20. Rate of COVID-19 Cases by Race & Ethnicity in Marion County
21. Rate of COVID-19 Hospitalizations by Race & Ethnicity in Marion County
22. Rate of COVID-19 Deaths by Race & Ethnicity in Marion County

Infections, Hospitalizations & Deaths by Onset Date - Monthly Summary (through 10/31/20)

Severity of Disease by Month

	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Cumulative Rate
Case Hospitalized Rate	75.0%	26.9%	15.8%	8.1%	9.1%	5.5%	5.2%	6.0%	4.7%	7.4%
Case Fatality Rate	0.0%	5.0%	3.6%	2.3%	4.0%	1.7%	1.2%	1.3%	0.3%	1.8%

Monthly Distribution of Infections, Hospitalizations, and Deaths

	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Total
Infections	0%	4%	6%	7%	11%	18%	19%	16%	20%	100%
Hospitalizations	1%	14%	13%	8%	13%	14%	13%	13%	13%	100%
Deaths	0%	11%	12%	9%	24%	17%	13%	12%	4%	100%

This page shows how the level of infection and severity of COVID-19 is progressing in the county, summarized by month, so as to show broad trends.

Cases: Numbers and Trends

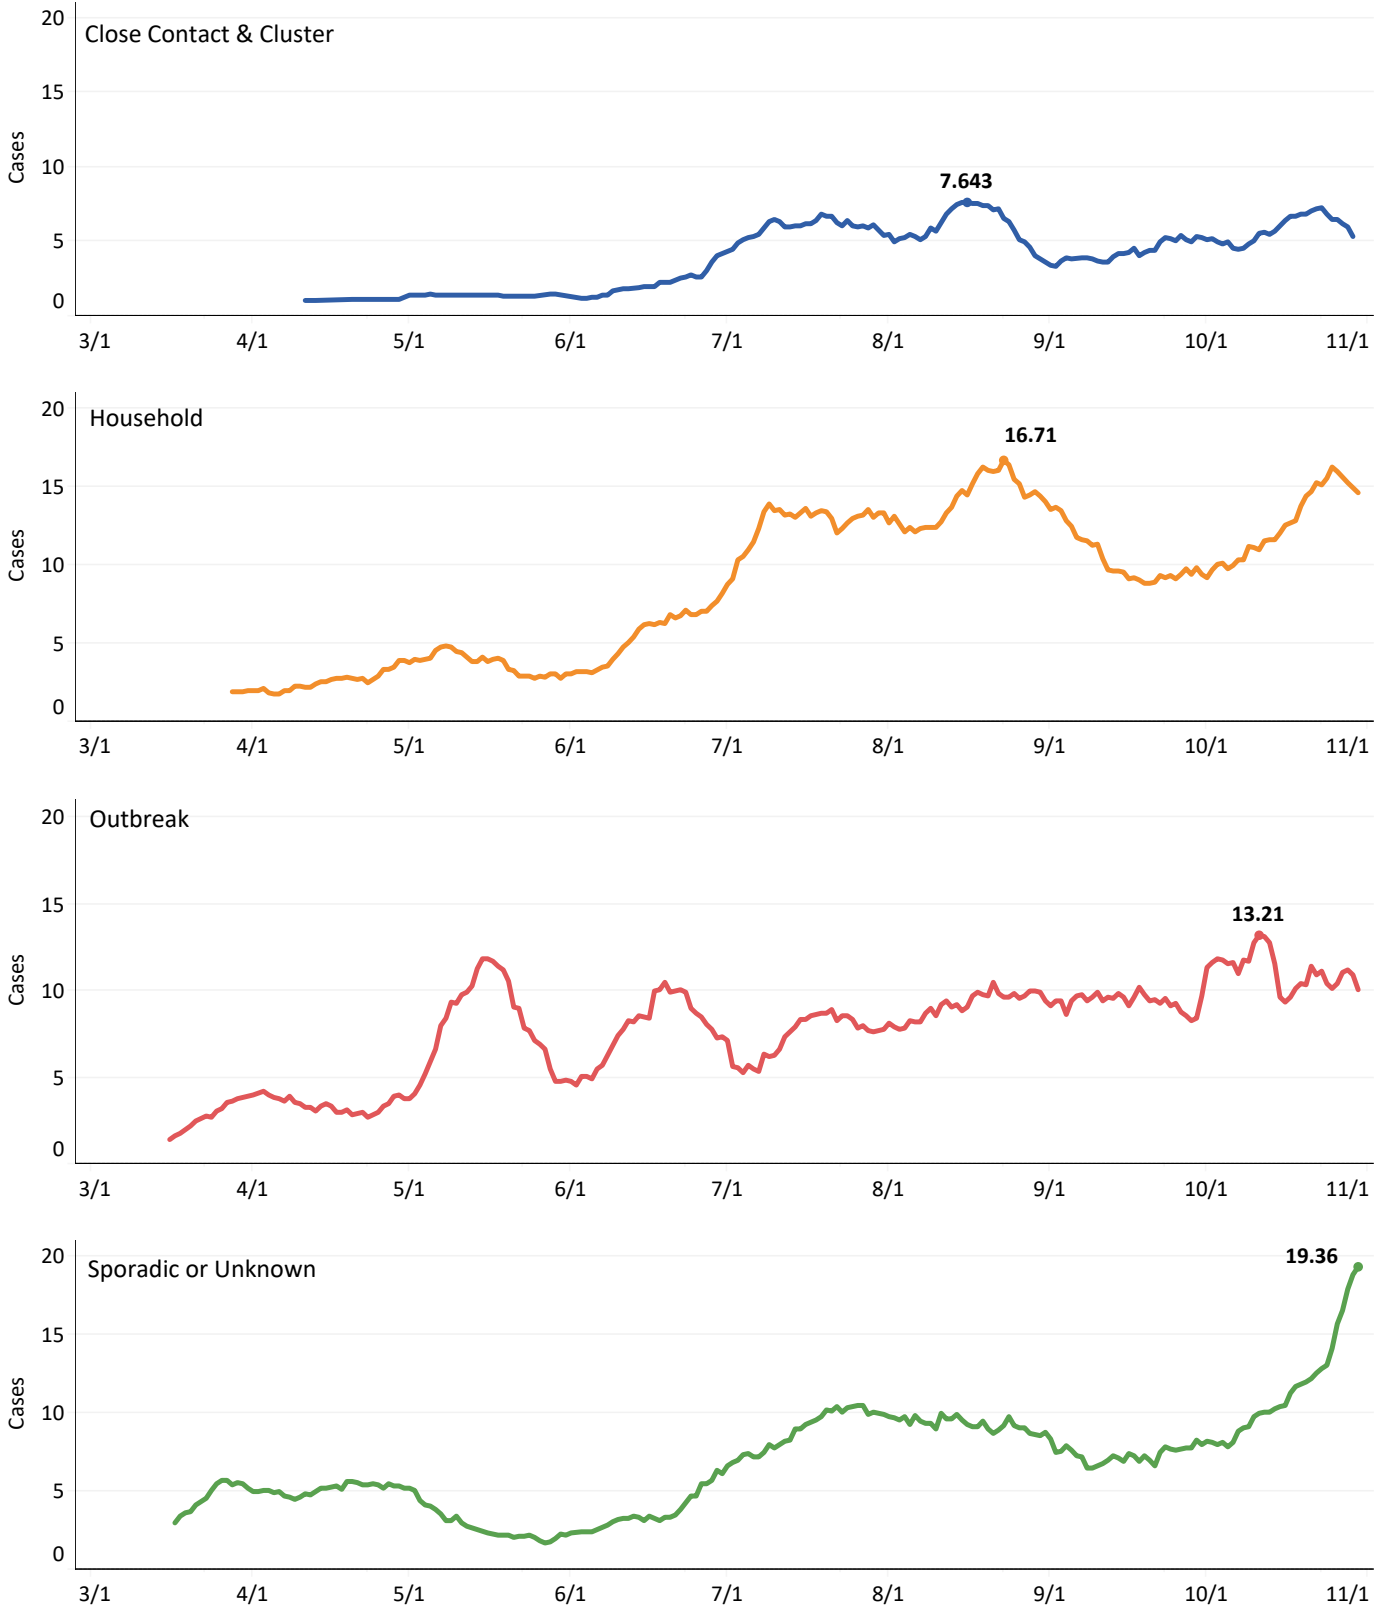

Two views of number of infections over time by date of symptom onset: the top chart show the number of infections per day over time, along with a single trend line over the local pandemic period. The bottom chart shows how the trend changes by month, going through cycles of increase, plateau, and decrease.

Hospitalizations: Numbers and Trends

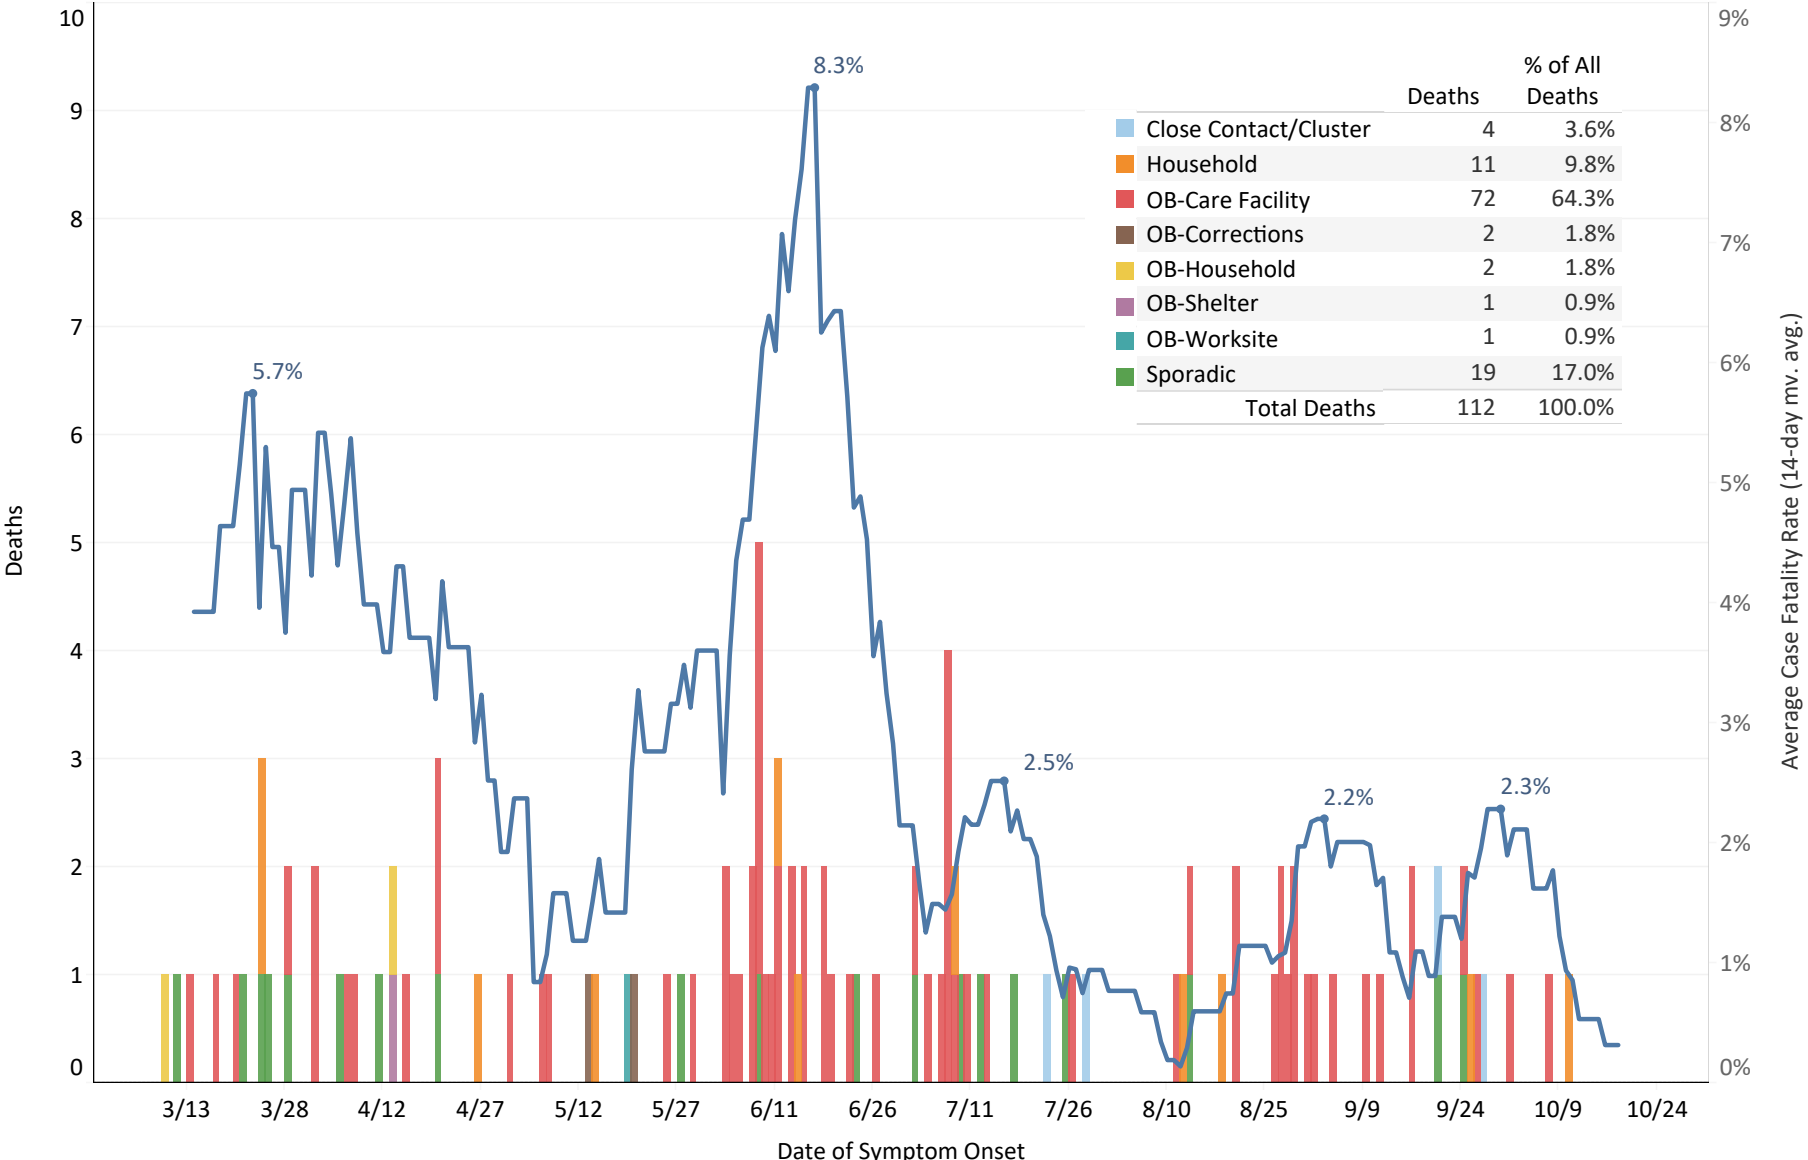

Two views of hospitalizations over time by symptom onset date: the top chart show the number of infected people admitted to the hospital along with a single trend line over the local pandemic period. The bottom chart shows how the trend changes by month, going through cycles of increase, plateau, and decrease.

Infection Trends by Source (14-day moving average)

These four charts show the different sources of infection and their general trends using a 14-day moving average. The dates reflect the date of symptom onset.

Deaths by Infection Source and Case Fatality Rate

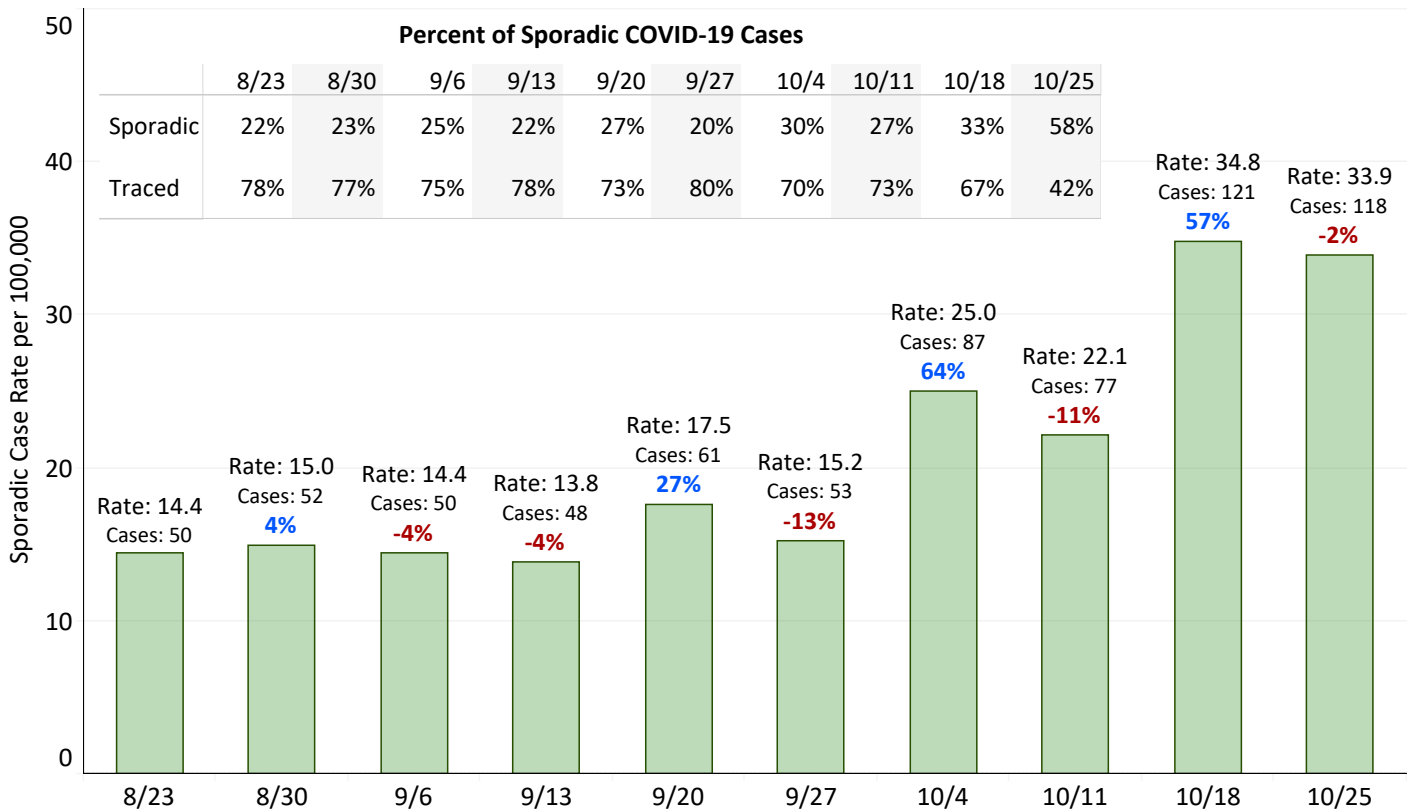

This chart shows the relationship between cases and deaths via the case fatality rate and the infection source of deaths over time. The table displays the number of deaths from each infection source and its share of fatalities.

Distribution and Number of Deaths by Infection Source-Cumulative

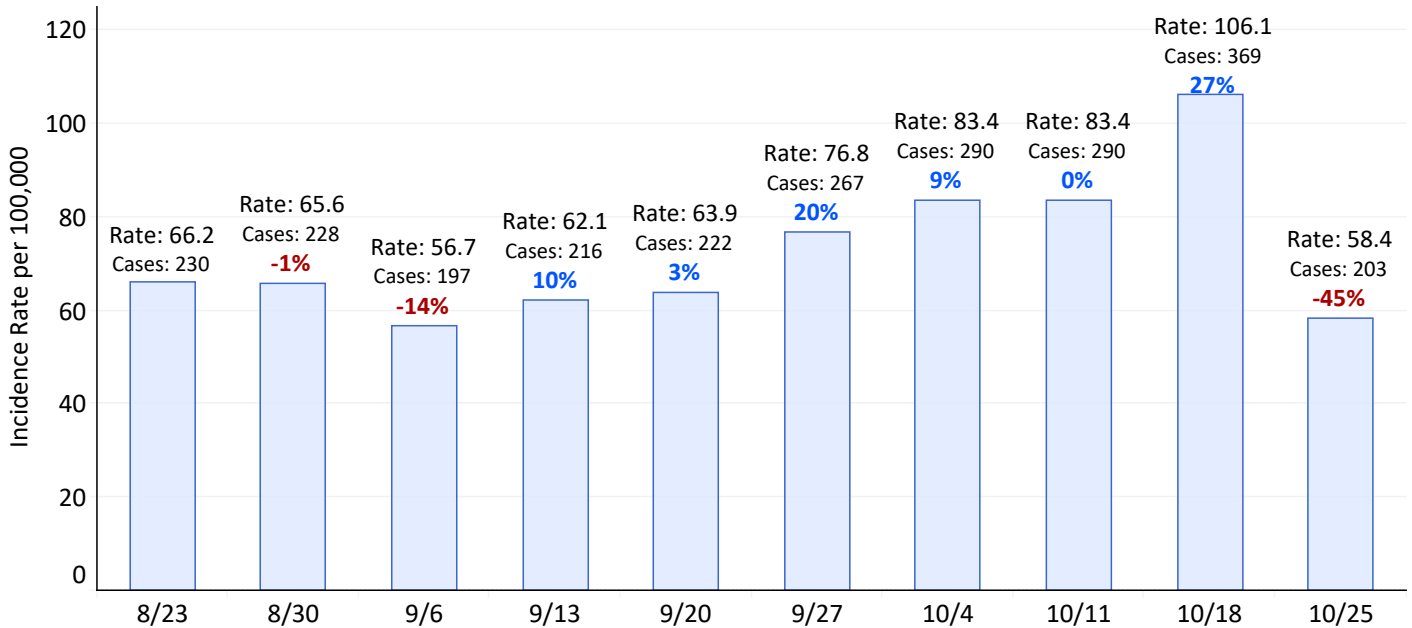

These two charts display the cumulative counts and percentages of deaths by source of infection. Also listed are the number of deaths, by place of death, for each source.

Weekly Sporadic Case Rate and Counts (Sunday - Saturday)

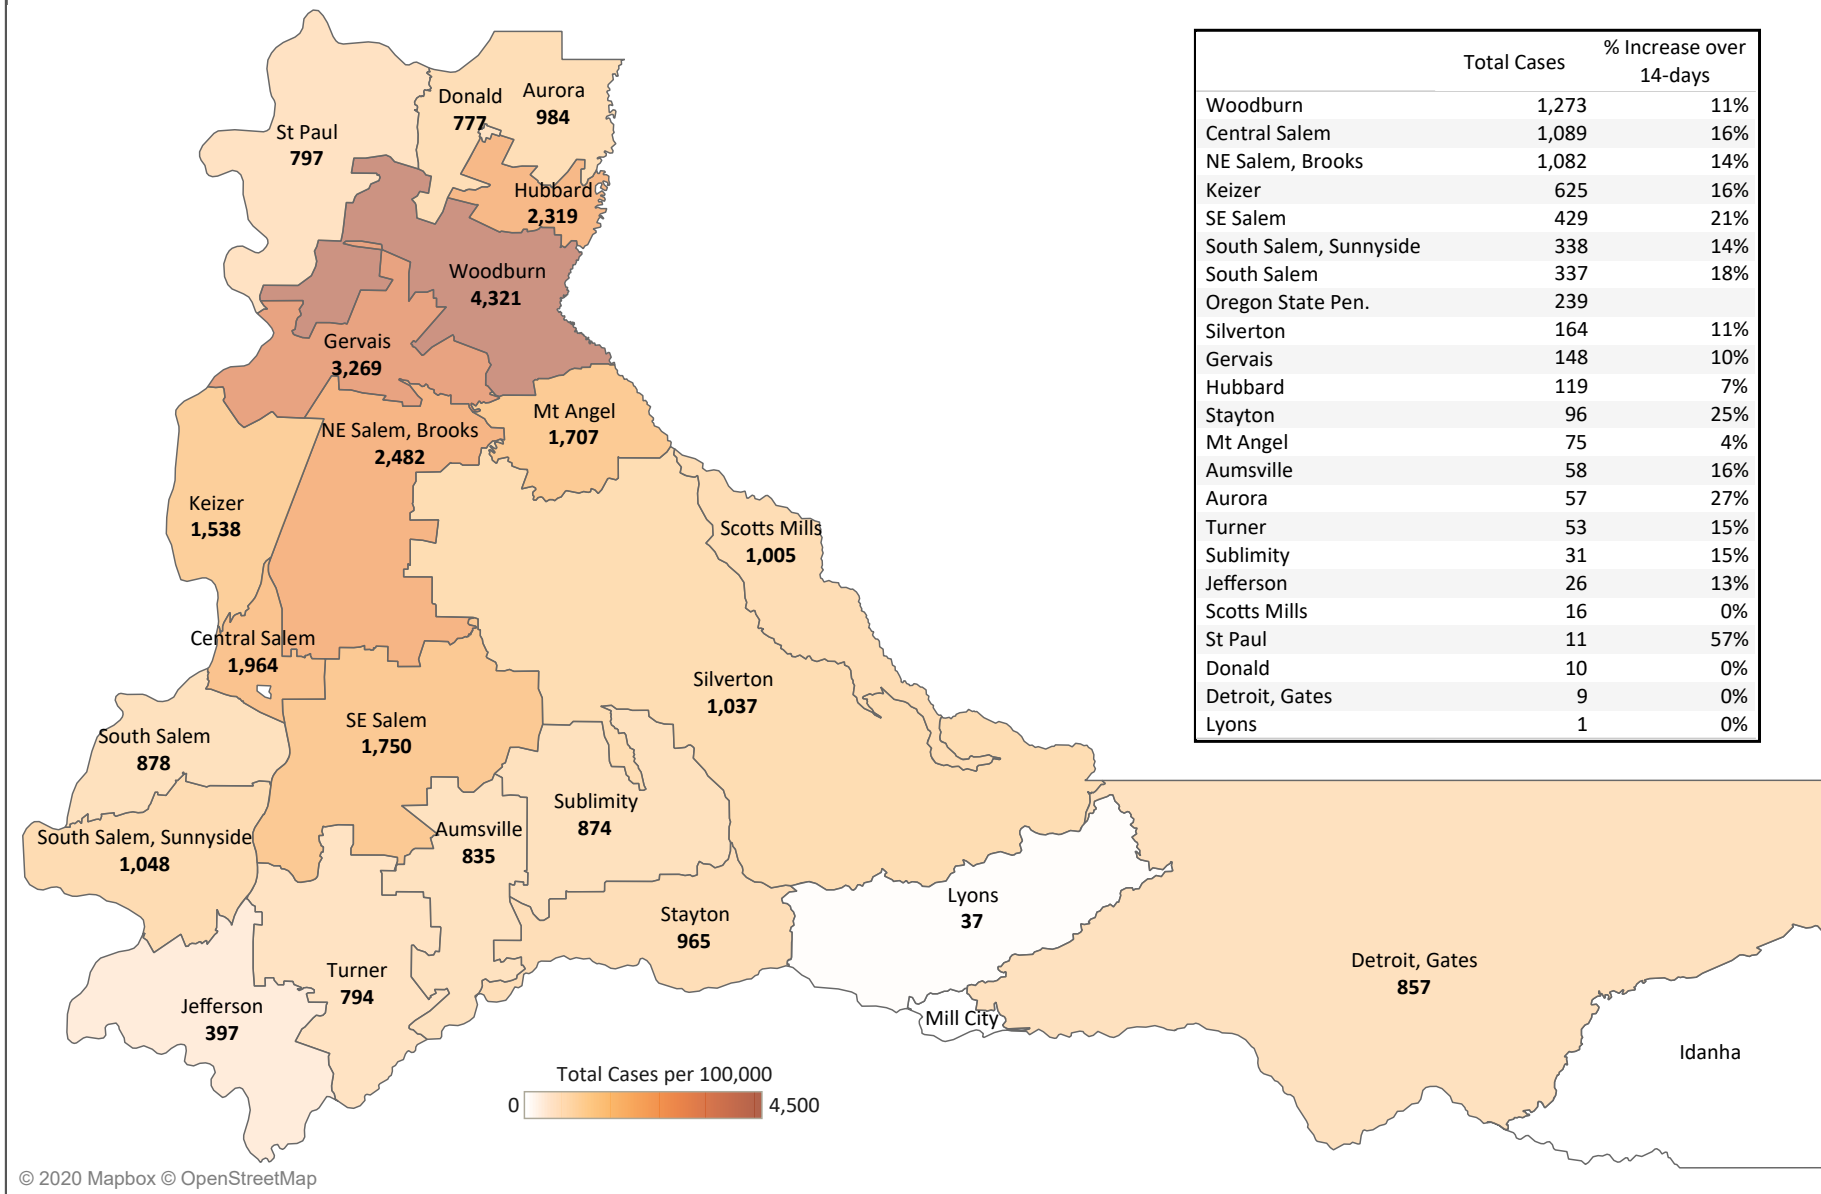

Weekly Case Rate and Counts (Sunday - Saturday)

The upper chart tracks the weekly count and percent change in sporadic (untraced) cases. The lower charts provides the same information for all cases, traced and untraced. Recent sporadic case counts will likely decline over time as cases are investigated. Weeks are assigned by symptom onset date, hence the last week's rate and count will be low as not all cases have been reported.

Cumulative Incidence Rate (up through 11/2)

This map displays the cumulative number of cases per 100,000 by geographic area, highlighting areas of high infection rates. The table lists case counts and percent increase over the past 14-days for each area.

Rate of COVID-19 sporadic cases by zip code in Marion County per 100,000 population, 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

Count of COVID-19 sporadic cases by zip code in Marion County (N=1,676), 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

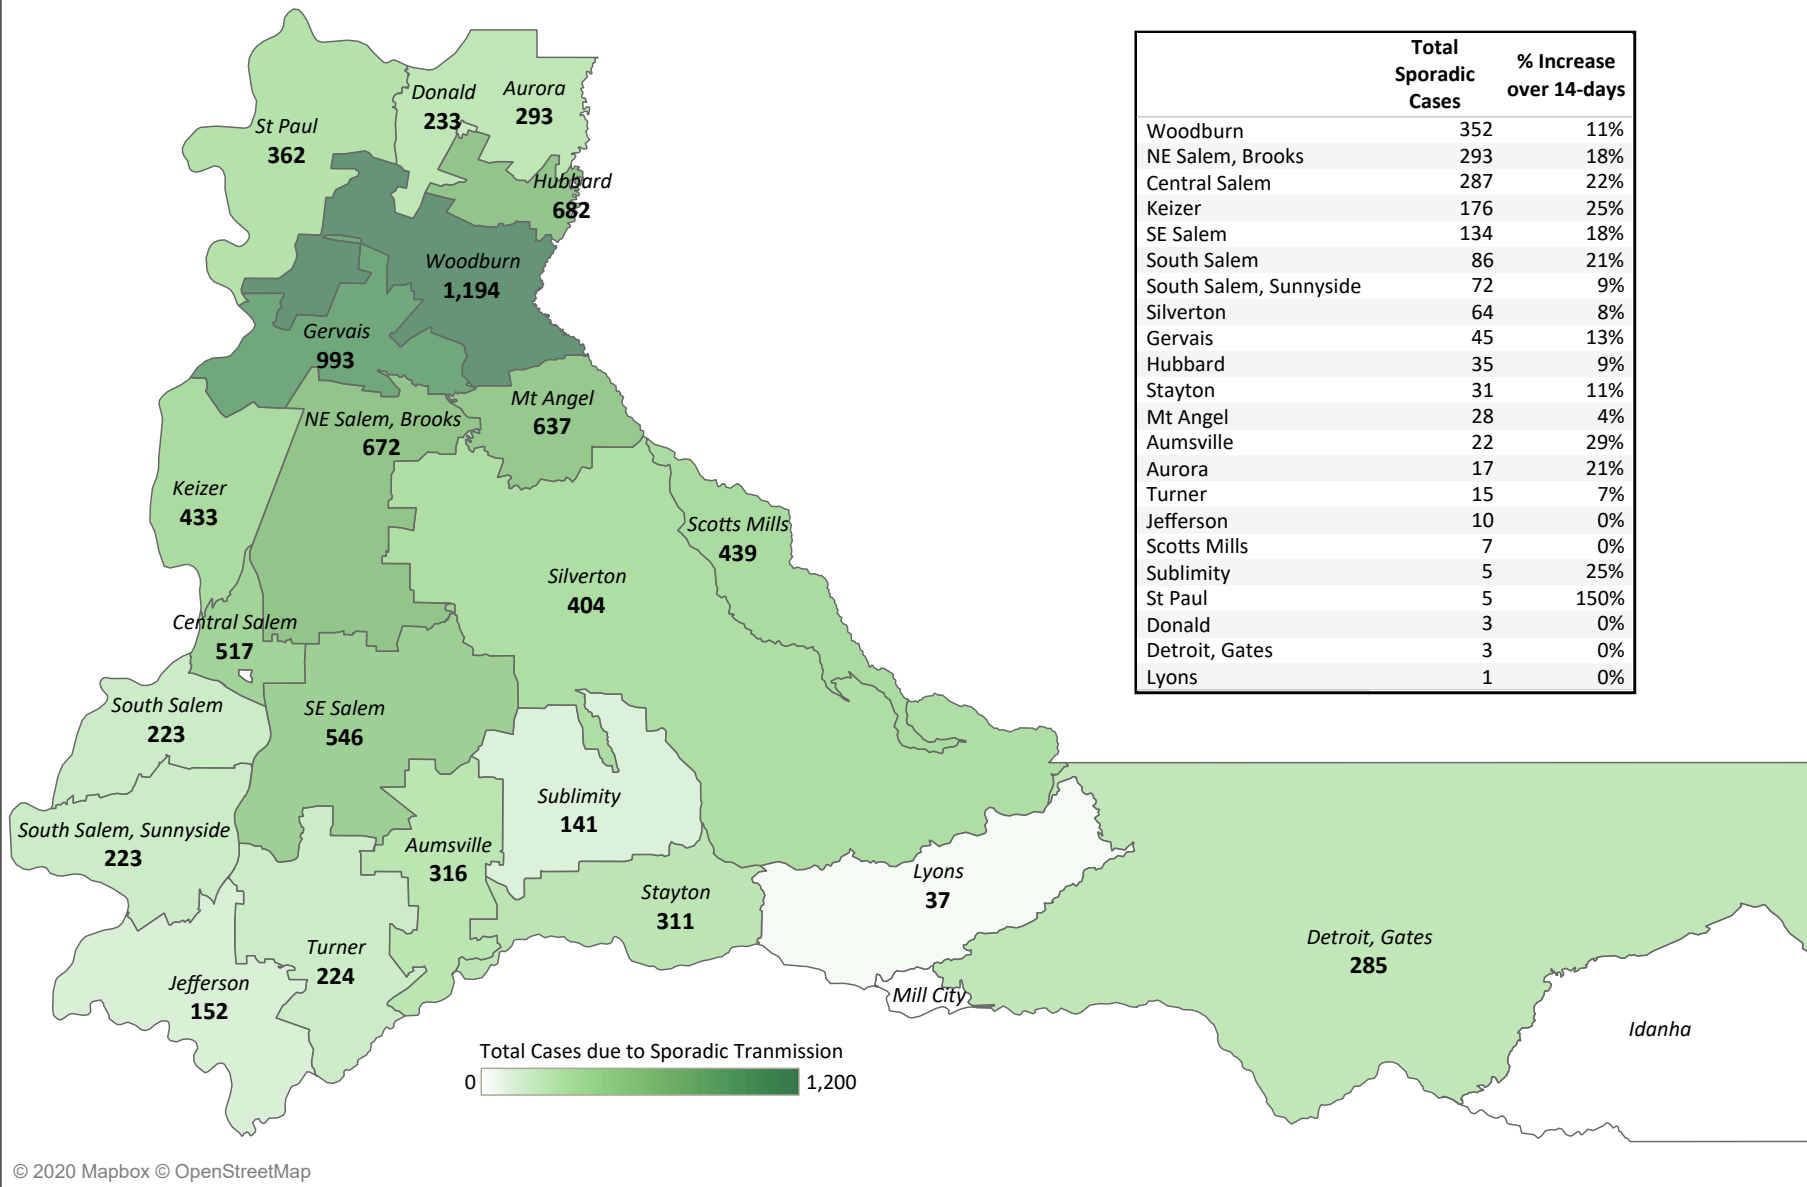

This slide shows the rate of sporadic (community acquired) COVID-19 transmission per 100,000 amongst cases in Marion County. When taking population size into account, sporadic COVID-19 transmission was highest in “North County” zip codes (Woodburn, Gervais, Hubbard, and Mt Angel). Of note, the sporadic case rate is higher in Marion County than Oregon, suggesting that more cases per capita became infected from an unknown source in Marion than Oregon cases as a whole. The bulk of sporadic cases by count are coming from Woodburn, Central Salem, and NE Salem Brooks zip codes. Generated 11/1/20. ****Updated bi-weekly****

Daily Case Numbers Due to Sporadic Transmission (through 10/31)

Sporadic cases are infections that have *not* been traced to a source. This chart shows the number of cases due to sporadic infection by symptom onset date and the general trend over the period of the pandemic.

Rate of Sporadic Transmission by Area

This maps displays the cumulative incidence rate (per 100,000) by area for cases with sporadic transmission. The table shows the total number of sporadic cases for each area and the percent increase for sporadic cases between the week of October 11th and the week of October 25th.

Distribution of Cases, Hospitalizations and Deaths by Infection Source

■ Close Contact & Cluster
 ■ Sporadic
 ■ Outbreak
 ■ Household

Cases

Hospitalizations

Deaths

Charts display the monthly distribution by infection source for Cases, Hospitalized and Deaths, over the past five months. The month is assigned by date of symptom onset.

Percentage of COVID-19 cases in Marion County by source of infection, 1/1/20 - 10/31/20, ORPHEUS

This slide shows the breakdown of infection source for COVID-19 cases in Marion County. The most common type of infection source in Marion is household transmission (32%), followed by outbreaks (29%). **It is important to note that this figure should not be directly compared to the state graph as they don't take into account differences in population size.** Close contact/cluster = contact between cases from different households not associated with a facility. These are typically referred to as social event outbreaks. Generated 11/1/20. **Updated bi-weekly**

Percentage of COVID-19 cases in Oregon by source of infection, 1/1/20 - 10/31/20, ORPHEUS

This slide shows the percentage of COVID-19 cases by the likely source of infection in Oregon. In Oregon, the most common source of infection for COVID-19 cases are sporadic (34%), or that they cannot be ascertained, these are said to be “community acquired”. The second most common source is outbreaks (29%), followed by household transmission (27%). **It is important to note that this figure should not be directly compared to the Marion graph as they don’t take into account differences in population size.** Generated 11/1/20. **Updated bi-weekly**

Percentage of COVID-19 cases associated with an outbreak by type of facility in Marion County, 10/17/20, ORPHEUS

This slide shows the percentage of COVID-19 cases by type of outbreak facility in Marion County. The most common source of outbreaks were at long-term-care-facilities (LTCF) (34%), followed by corrections (18%), and agricultural/food processing (14%). Generated 10/18/20. ****Updated monthly****

Percentage of COVID-19 cases associated with an outbreak by type of facility in Marion County, 1/1/20 - 10/17/20, ORPHEUS

This slide shows the overall summary of source of COVID-19 infection in Marion County with a further breakdown of outbreaks. OB = outbreaks. Generated 10/18/20. **Updated monthly**

Percentage of COVID-19 deaths in Marion County with underlying medical conditions (N=93), ORPHEUS, 9/27/20

This slide shows the percentage of COVID-19 deaths in Marion County with underlying medical conditions. All of the 93 people who've died in Marion County had some sort of underlying medical condition (100%). The most common underlying condition for those who've died was heart (62%), neurological (51%), diabetes (36%), and other conditions (34%). Other conditions can be any chronic condition that doesn't fall into the groups listed above (e.g. anemia, hypertension (high blood pressure), arthritis, cancer, etc.). Generated 10/1/20. **Updated as needed**

Percentage of COVID-19 deaths in Marion County by the number of underlying medical conditions present at time of death (N=93), ORPHEUS, 9/27/20

This slide shows the percentage of COVID-19 deaths broken out by the number of underlying conditions present at time of death. The average number of conditions was 2.8, with a minimum of 1, and maximum of 7. Generated 10/1/20. ****Updated as needed****

Rate of COVID-19 cases by race & ethnicity in Marion County per 10,000 population, 1/1/20 - 11/1/20, ORPHEUS & Census Bureau

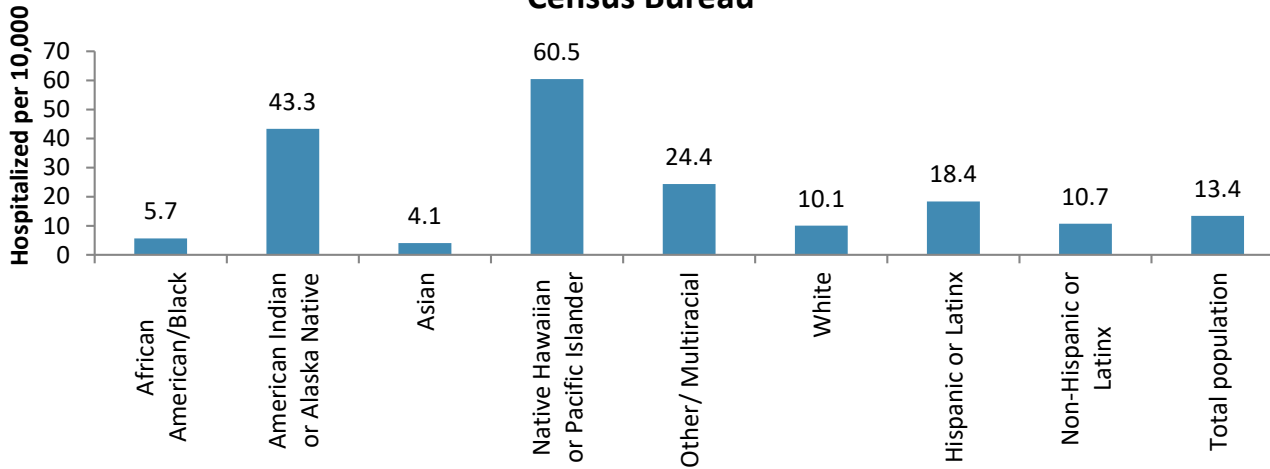

Count of COVID-19 cases (N=6,310) by race & ethnicity in Marion County, 1/1/20 - 11/1/20, ORPHEUS & Census Bureau

COVID-19 infects communities of color at higher rates. People who identified as American Indian/Alaskan Native and Native Hawaiian/Pacific Islander had the highest incidence rates of any racial group in Marion County. People who identified as Hispanic or LatinX had higher incidence rates than their Non-Hispanic or LatinX counterparts. (335 per 10,000 Vs. 98 per 10,000). At this time, 3,135 people from the Hispanic or LatinX community have been infected by COVID-19. Generated 11/2/20. **Updated bi-weekly**

Rate of COVID-19 hospitalizations by race & ethnicity in Marion County per 10,000 population, 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

In the community, people who identified as Native Hawaiian or Pacific Islander had the highest rate of hospitalizations of any racial group (60.5 per 10,000). People who identified as Hispanic or LatinX had higher hospitalization rates than their Non-Hispanic or LatinX counterparts (18.4 per 10,000 Vs. 10.7 per 10,000). At this time, 465 people in the community have been hospitalized with COVID-19. Generated 11/1/20. **Updated bi-weekly**

Count of COVID-19 hospitalizations(N=465) by race & ethnicity in Marion County, 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

Rate of COVID-19 deaths by race & ethnicity in Marion County per 10,000 population, 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

Count of COVID-19 deaths (N=112) by race & ethnicity in Marion County, 1/1/20 - 10/31/20, ORPHEUS & Census Bureau

The COVID-19 mortality rate was highest amongst the Native Hawaiian and Pacific Islander community (8.2 per 10,000) in Marion County. People who identified as non-Hispanic or LatinX had higher mortality rates from COVID-19 than their Hispanic or LatinX counterparts (3.4 per 10,000 Vs. 2.1 per 10,000). At this time, 112 people in the community have died due to COVID-19. Generated 11/1/20. ****Updated bi-weekly****
